Torrini d'estrazione centrifughi a scarico verticale e orizzontale certificati F400 per estrazione fumi d'incendio
Centrifugal roof fans vertical and horizontal discharge certified F400 for smoke extraction

DESCRIZIONE

Torrini di estrazione centrifughi per aspirazione diretta o canalizzata adatti all'evacuazione di fumi ad alta temperatura. Disponibili con flusso orizzontale (CRP) o verticale (CRP V).

La serie è idonea al funzionamento alla temperatura di +150°C in servizio S1 ed è certificata CE in classe F400 secondo la Normativa EN12101-3:2015 dall'ente certificatore autonomo APPLUS.

COSTRUZIONE

- Telaio di base in lamiera d'acciaio. Protetto contro gli agenti atmosferici con vernici a polveri epossipoliesteriche.
- Rete di protezione in lamiera zincata microstridata quadra e protetta contro gli agenti atmosferici. Realizzata a norme EN ISO 12499.
- Girante a pale rovesce, ad alto rendimento aeraulico e bassa rumorosità, in lamiera zincata, progettata per resistere ad alte temperature. Bilanciata staticamente e dinamicamente secondo ISO 21940-11:2017. Direttamente accoppiata al motore.
- Portamotore, struttura, copertura motore e convogliatore per scarico verticale realizzati in lamiera d'acciaio zincata e protetta contro gli agenti atmosferici.
- Robustezza costruttiva: Cappello di copertura realizzato in robusta lamiera d'acciaio zincata, pensata per resistere anche a fenomeni grandinigeni violenti.

MOTORE

Motore asincrono trifase a norme internazionali IEC 60034, IEC 60072, EMC 2014/30/EC, LVD 2014/35/EU, marcato CE, IP55, classe F, Grado di protezione IP55. Esecuzione 5 (accoppiamento diretto con girante a sbalzo su motore flangiato). Motore separato dal flusso d'aria.

ACCESSORI

- CCR - CCRz - Reti di protezione
- GRZ - Silenziatori quadrati
- CCsa/b - Silenziatori cilindrici
- DGZ - Kit fissaggio accessori quadri
- CB - Controbase a murare
- PBZ - Riduzione silenziata
- RAZ - Piastra di raccordo
- BDD V - Serranda di non ritorno
- CCga HT - Giunto flessibile antivibrante
- CCbo - Boccaglio
- CCf - CCfc - Controflange
- Interruttore di servizio.

DESCRIPTION

Centrifugal extraction roof fans for direct or ducted application, suitable for the evacuation of high-temperature fumes. Available with horizontal (CRP) or vertical (CRP V) discharge.

The series is suitable for operation at a temperature of +150°C in S1 service and is CE certified in class F400 according to EN12101-3:2015 by the independent certification body APPLUS.

CONSTRUCTION

- Base frame in galvanized steel sheet protected against atmospheric agents with epoxy finish.
- Protection guard in drawn steel rod protected against the atmospheric agents. Made according to ISO 12499.
- Backward curved impeller in galvanized steel sheet, with high efficiency and low noise level, designed to resist at high temperature. Statically and dynamically balanced according to ISO 21940-11:2017. Directly coupled to flanged motor.
- Motor support, structure, cover, and vertical discharge conveyor made of galvanized steel sheet and protected against atmospheric agents.
- Structural robustness: Roof cap made of sturdy steel sheet, designed to withstand even severe hailstorms.

MOTOR

Asynchronous three-phase motor manufactured according to international standards IEC 600034, IEC 60072, EMC 2014/30/UE, LVD 2014/35/UE, CE marked, IP 55, class F. Execution 5 (direct coupling with impeller on flanged motor). Motor separated from the air stream.

ACCESSORIES

- CCR - CCRz - Protection guards
- GRZ - Squared silencers
- CCsa/b - Cylindrical silencers
- DGZ - Mounting kit for squared accessories
- CB - Counterbase to wall-up
- PBZ - Silenced reduction (Purlin box)
- RAZ - Connecting plate
- BDD V - Backdraught dumper
- CCga HT - Flexible antivibration connector
- CCbo - Inlet/outlet cone
- CCf - CCfc - Counterflanges
- Service switch.

PRESTAZIONI | PERFORMANCE

CRP HT | CRP V HT

Le prestazioni aerauliche sono rilevate in conformità alla norma EN ISO 5801/AMCA 210 con densità dell'aria standard avente peso specifico 1,2 Kg/m³. Il livello di potenza sonora è ottenuto secondo la norma EN ISO 3746. Installazione C. Alimentazione 400V/3Ph/50Hz.

Air performances are measured according to EN ISO 5801 / AMCA 210 standard with air density with 1.2 kg/m³ specific weight. The sound power level is obtained according to EN ISO 3746. Installation C. Power supply 400V/3Ph/50Hz.

AVVERTENZE E ESEMPI DI INSTALLAZIONE

WARNINGS AND INSTALLATION EXAMPLES

Gli aspiratori **CRP HT** e **CRP V HT** sono installabili a tetto e possono essere collegati ad accessori con sezione quadrata o circolare. Si vedano gli esempi illustrativi nelle pagine seguenti.

Di seguito sono riportati cinque esempi di installazione che illustrano le principali configurazioni di accoppiamento con gli accessori disponibili. Per qualsiasi dubbio o esigenza, contattare l'Ufficio tecnico- commerciale di Maico Italia.

Si raccomanda inoltre l'uso di appropriati sistemi impermeabilizzanti, indispensabili per garantire la massima protezione da infiltrazioni d'acqua durante la posa del torrino sulla struttura. Particolare attenzione deve essere prestata all'appoggio della base del torrino o del silenziatore sulla struttura.

L'installatore deve verificare che la sigillatura sia continua, uniforme e priva di aperture. Un'installazione non eseguita correttamente può infatti causare infiltrazioni d'acqua, compromettendo l'impermeabilità e la durabilità dell'intero sistema.

Per installazioni in aree caratterizzate da precipitazioni intense, consigliamo il modello CRP V a scarico verticale, che garantisce una maggiore protezione contro l'ingresso dell'acqua.

The **CRP HT** and **CRP V HT** fans can be installed on roofs and connected to squared or circular accessories. See the illustrative examples on the following pages.

Below are five installation examples illustrating the main configurations for coupling with the available accessories. If you have any questions or requirements, please contact the Maico Italia Technical-Commercial Office.

We also recommend the use of appropriate waterproofing systems, which are essential to ensure maximum protection against water infiltration during the installation of the roof fan on the structure. Particular attention must be paid to the support of the base of the fan or silencer on the structure.

The installer must check that the seal is continuous, uniform and free of openings. Incorrect installation can cause water infiltration, compromising the waterproofing and durability of the entire system.

For installations in areas with heavy rainfall, we recommend the CRP V model with vertical discharge, which provides enhanced protection against water ingress.

CB | CONTROBASE A MURARE | COUNTERBASE TO WALL UP

Garantisce un ancoraggio efficace al cavedio mediante la muratura delle quattro zanche appositamente realizzate.
Realizzata in lamiera zincata.

It provides reliable anchoring to the cavity by means of four specially designed anchors fixed into the masonry.
Made of galvanized steel sheet.

GRZ | SILENZIATORI SEZIONE QUADRA CON BASE E RACCORDO QUADRO TONDO SQUARED SILENCERS WITH SQUARE TO ROUND BASE

Silenziatore a sezione quadra con base e setto centrale ribassato. La base ha una forma quadro-tonda, studiata per consentire l'abbinamento con accessori di forma circolare.
Materiale fonoassorbente in lana minerale.
Struttura portante in lamiera zincata.

Square section silencer with base and lowered central pod. The base has a square-round shape, designed to allow combination with circular accessories. Sound-absorbing material in mineral wool. Supporting structure in galvanized steel sheet.

CCsa | CCsb | SILENZIATORI CILINDRICI | CYLINDRICAL SILENCERS

Silenziatori cilindrici CCs disponibili in due versioni, senza ogiva (CCsa) e con ogiva (CCsb). La presenza dell'ogiva permette una maggiore attenuazione della rumorosità ma genera una perdita di carico aggiuntiva nell'impianto: vedi diagramma riportato.

I silenziatori sono fornibili in lunghezza pari a 1 - 1,5 - 2 volte il diametro (b). Costruiti in lamiera zincata, la parte interna e l'ogiva in lamiera forata per un'azione efficace del materassino fonoassorbente in lana minerale. Temperatura d'esercizio compresa fra -40 e +150°C in servizio S1. Certificati F400.

Cylindrical silencers available in two versions, without pod (CCsa) and with pod (CCsb). The presence of the pod allows a higher noise attenuation, but creates an additional pressure drop in the system: see the reported diagram. Silencers can be provided with length equal to 1 - 1,5 - 2 times the diameter (b).

Manufactured completely in galvanized steel. The internal part and the pod is made of perforated sheet, to effectively allow the sound absorption of the acoustic lining in mineral wool.

Working temperature is from -40°C to +150°C in S1 service. F400 certified

BDD V | SERRANDA DI NON RITORNO | BACKDRAUGHT DAMPER F400

Serranda di chiusura che consente il ritorno delle alette in posizione tappata. Evitano inutili dispersioni di calore e implicano un'irrelevante perdita di carico. Le alette della serranda si aprono con la depressione dell'aria generata dal ventilatore in moto. Si chiudono per gravità al suo spegnimento. Cassa in lamiera verniciata e alette in lamiera zincata. Temperatura di esercizio in S1 max. +150°C. Certificate F400.

Backdraught damper that allows the return of the flaps in closed position. They avoid heat dispersion when the fan is off and require a negligible opening pressure. The shutter flaps are opened by the air depression produced by the fan when working. They shut down by gravity. Casing in painted steel sheet and flaps in galvanized steel sheet. Max. temperature in S1 +150°C. F400 certified.

CCga HT | GIUNTO FLESSIBILE ANTIVIBRANTE | FLEXIBLE ANTIVIBRATION CONNECTOR F400

Impedisce la trasmissione delle vibrazioni lungo la canalizzazione.

È composto da due flange in lamiera d'acciaio, conformi alla norma ISO 13351:2010, per il fissaggio al ventilatore e al canale, e da un nastro di collegamento flessibile e resistente. Temperatura di esercizio in S1 max. +150°C. Certificate F400.

Le parti in lamiera sono verniciate con polveri epossipoliesteriche.

Prevents the transmission of vibrations along the ductwork.

It consists of two steel sheet flanges, compliant with ISO 13351:2010, for connection to the fan and the duct, and a flexible, heavy-duty connecting strip.

Max. temperature in S1 +150°C. F400 certified.

Steel sheet parts are coated with epoxy-polyester powder paint.
